### Volume 21 No. 1 1995

#### Special Issue: Proteasomes and Related Complexes

<b>Introduction</b>	1–2
H.-P. Schmid, Y. Briand	
<b>Proteasomes of the yeast <i>S. cerevisiae</i>: genes, structure and functions</b>	3–10
W. Hilt, D. H. Wolf	
<b>Structural features of archaeabacterial and eukaryotic proteasomes</b>	11–20
A. J. Koster, J. Walz, A. Lupas, W. Baumeister	
<b>Molecular biology of proteasomes</b>	21–26
K. Tanaka	
<b>Subunits of the regulatory complex of the 26S protease</b>	27–34
W. Dubiel, K. Ferrell, M. Rechsteiner	
<b>Catalytic components of proteasomes and the regulation of proteinase activity</b>	35–41
A. J. Rivett, G. G. F. Mason, S. Thomson, A. M. Pike, P. J. Savory, R. Z. Murray	
<b>Relationships between proteasomes and RNA</b>	43–47
H.-P. Schmid, M.-N. Pouch, F. Petit, M.-H. Dadet, S. Badaoui, G. Boissonnet, J. Buri, V. Norris, Y. Briand	
<b>Roles of proteasomes in cell growth</b>	49–52
A. Ichihara, K. Tanaka	
<b>Proteasome and class I antigen processing and presentation</b>	53–56
M. P. Belich, J. Trowsdale	
<b>The 20S/26S proteasomal pathway of protein degradation in muscle tissue</b>	57–62
B. Dahlmann, L. Kuehn	
<b>Multicatalytic proteinase in fish muscle</b>	63–69
J. J. Sánchez, E. J. Folco, L. Busconi, C. B. Martone, C. Studdert, C. A. Casalongué	
<b>Proteolytic activity of proteasome on myofibrillar structures</b>	71–73
R. G. Taylor, C. Tassy, M. Briand, N. Robert, Y. Briand, A. Ouali	

### Volume 21 No. 2 1995

#### Review

<b>α-Crystallins, versatile stress-proteins</b>	75–80
W.C. Boelens, W.W. de Jong	

#### Research articles

<b>Assignment of Alu-repetitive sequences to large restriction fragments from human chromosomes 6 and 22</b>	81–84
E. Meese, H.-W. Müller, N. Brass, J.M. Trent, N. Blin	

<b>Nucleotide sequence of a highly repetitive element isolated from <i>Opsarichthys uncirostris</i> (Osteichthyes) <i>O. uncirostris</i> repetitive sequence</b>	<b>85–86</b>
M. Kato, M. Yoshida	
<b>The inhibitory domain in the Oct-2 transcription factor represses gene activity in a cell type-specific and promoter-independent manner</b>	<b>87–94</b>
K.A. Lillycrop, D.S. Latchman	
<b>The size heterogeneity of human lysyl oxidase mRNA is due to alternate polyadenylation site and not alternate exon usage</b>	<b>95–103</b>
C.D. Boyd, T.J. Mariani, Y. Kim, K. Csiszar	
<b>Expression of cDNA fragment encoding sperm membrane peptide in <i>E. coli</i></b>	<b>105–112</b>
Y. Li, Y.C. Yan, W. Guo, F. Zhao, J. Lai, S.S. Koide	
<b>Analysis of transfer RNA during the early embryogenesis of the freshwater teleost, <i>Heteropneustes fossilis</i></b>	<b>113–118</b>
P.R. Subbarayan, M. Sarkar, M. Vinayak	
<b>Methodology paper</b>	
<b>The two-hybrid: an <i>In vivo</i> protein-protein interaction assay</b>	<b>119–127</b>
C. Transy, P. Legrain	

**Volume 21 No. 3 1995****Research articles**

<b>Regulation of Oct-4 gene expression during differentiation of EC cells</b>	<b>129–140</b>
J. Schoorlemmer, L. Jonk, S. Shen, A. van Puijenbroek, A. Feijen, W. Kruijer	
<b>Mammalian expression of single chain variable region fragments dimerized by Fc regions</b>	<b>141–146</b>
T. Kato, K. Sato, S. Suzuki, H. Sasakawa, M. Kurokawa, K. Nishioka, K. Yamamoto	
<b>A complex interplay of positive and negative elements is responsible for the different transcriptional activity of liver NF1 variants</b>	<b>147–158</b>
P. Monaci, M. Nuzzo, S. Stämpfli, D. Tollervy, V. De Simone, A. Nicosia	
<b>Proteins binding to the promoter region of the operon encoding the major outer surface proteins OspA and OspB of <i>Borrelia burgdorferi</i></b>	<b>159–164</b>
N. Margolis, D. Scott Samuels	
<b>The primary structure of <i>Harpalus rufipes</i> 5S ribosomal RNA A contribution for understanding insect evolution</b>	<b>165–167</b>
M.Z. Barciszewska, A. Gawroński, M. Szymański, V.A. Erdmann	
<b>Volume contents</b>	<b>169–170</b>
<b>Author index</b>	<b>171</b>
<b>Instructions to authors</b>	<b>172–174</b>
